

Ground Cover

MyPex Ground Cover from Growing Technologies is a multi-purpose woven fabric designed to function effectively in a wide range of horticultural applications. Unlike conventional film, it offers the grower a number of important advantages. MyPex Ground Cover is manufactured from 100% UV Stabilised polypropylene. It resists tear and puncture and is unaffected by normal extremes of temperature. Use MyPex for container stock production under glass, tunnels or outdoors. Also widely used by bedding and pot plant growers and in an increasing number of landscaping applications.

MyPex Ground Cover offers the grower the following advantages:

- MyPex is designed to give complete weed suppression in a natural way
- MyPex Ground Cover, unlike conventional films, allows water to seep through, this enables the use of overhead irrigation without puddling
- MyPex Ground Cover's porosity controls moisture and helps protect roots from the spread of fungal diseases and root rots
- MyPex aids accurate pot spacing, the green and white marker stripes spaced at 25cm intervals lengthways help ensure that pots are placed to ensure adequate growth space and irrigation. There are also green stripes every 50 cm across the roll
- MyPex is tough and will take frequent trafficking of small trucks without damage. Maintenance is minimal when pots are removed just sweep away debris, it can even be rolled up and used again if required
- MyPex effectively reduces costs and increases profits by reducing maintenance and improving product presentation - very important in today's markets
- MyPex is easy to handle and install. It can be laid onto the ground with a minimum of preparation. MyPex can also be used in conjunction with capillary sand beds and gravel beds if required

UAP Product Code	Size
MYPEX 1	1m x 100m
MYPEX 2	2m x 100m
MYPEX 3	3.25m x 100m
MYPEX 4	4.2m x 50m
MYPEX 5	5.25m x 50m
