

Polyfeed Soft Fruit Mix

Polyfeed Soft Fruit Mix has been formulated by Haifa Chemicals to provide all the nutrition required by strawberries, raspberries, currants, gooseberries and grapes throughout the growing season, with only extra N being required on occasions.

The fertiliser produces high yields of well-flavoured fruit with excellent keeping qualities and without over-stimulating vegetative growth.

The nutritional performance of Polyfeed (12-6-36+3+TE) makes it the most effective fertiliser available for these crops. It includes high levels of K, derived from potassium nitrate, together with a balanced combination of nitrogen, phosphorus and trace elements.

The ability to use just one fertiliser obviously simplifies operations for growers considerably. If extra N is needed, it can easily be added as ammonium nitrate.

UAP Product Code POLYFEED SF

Potassium Nitrate

Multi-K is a fully water soluble fertiliser consisting entirely of plant nutrients. The NPK analysis is 13-0-46, with the potassium as K_2O (38 per cent K). The product contains no chloride, sodium or any other elements harmful to plants, making it one of the safest fertilisers available.

All the nitrogen is in nitrate (NO_3) form, which is the most available type of N for plants to absorb, even in cool weather and low soil temperatures.

Multi-K is highly compatible with a wide variety of other fertilisers and agro-chemicals, and unlike potassium sulphate (SOP), it can be mixed with magnesium and calcium. The product is non-volatile, dust-free and easy to apply.

UAP Product Code POTN 2

Calcium Nitrate

Multi-Cal is high-quality calcium nitrate available in two formulations. In water-soluble form for fertigation and foliar sprays, the fertiliser has an analysis of 15.5-0-0 + 26.5CaO, while Mulki-Cal K is in prill form for soil application and has an analysis of 14-0-28 + 10CaO.

UAP Product Code CALN 2

Magnesium Nitrate

Magnisal is the ideal source of magnesium for plants, effectively tackling the problems of restricted plant development and reduced yields caused by Mg deficiency.

The product (formulation: 11-0-0+15.7Mg) is based on magnesium nitrate which is absorbed by the foliage more quickly than any other magnesium fertiliser. It can be applied by foliar feeding or fertigation. The glasshouse quality materials are fully water soluble and leave no residues.

UAP Product Code MAGN 1

MKP & MAP

Multi-MKP and Multi-MAP are fully water-soluble high-P products in crystalline form which can be blended with other fertilisers. Both are chloride-free and suitable for fertigation or foliar spraying.

The high phosphorus content of both fertilisers (MKP = 0-52-34 NPK and MAP = 12-61-0 NPK) is extremely effective in encouraging the development of root systems at the beginning of the growth season.

MKP - UAP Product Code MON P1

MAP - UAP Product Code MONO 2

Ammonium Nitrate

To order only (3 tonnes minimum)

Potassium Sulphate

UAP Product Code POTC 1

Trace Element Packs

UAP Product Code SOL 10
