

Fruit Picking Buckets

Harvestwear buckets have proven themselves to be not only functional, but highly durable. The rigid polyethylene shell provides full protection for your fruit from branches and ladders, while presenting a hard wearing outer surface.

Inside the bucket is a soft foam casing with PVC reinforced nylon liner. Harnesses are of webbing and metal hardware construction with 60mm wide closed-cell foam padding (prevents moisture absorption). Closure mechanism utilises a heavy duty braided rope and hook system.

The Maxi Apple Bucket is a radical design that fits around the body giving ease of access to the very bottom of the bag with a 36 litre capacity.

UAP Product Code	Description	Capacity
BUCK 2	Standard Apple Bucket	28 litre
BUCK 19	Maxi Apple Bucket	36 litre

Strawberry Bags

Haasnoot BV

Strawberry Bags

Haasnoot produce about four million strawberry bags per year which is about 300 hectares of fruit. In addition to manufacturing bags, Haasnoot also employ a team who provide a specialist advisory service.

Peat is sourced from bogs in several countries, but the key factor is that only the coarse, young, white peat is used with highest AFP (air-filled porosity). The choice of peat is always a compromise between getting maximum air to the roots and water holding capacity. (Compare a light sandy soil with irrigation to a clay soil without irrigation.) White peat is the most expensive and difficult to handle without destroying its natural structure.

UAP Product Code	MINI SERIES	PER PALLET
HAASMINI S	Mini Small (38 x 25 cm) ca. 10 litres	350
HAASMINI D	Mini Middle (50 x 25 cm) ca. 14 litres	250
HASSMINI L	Mini Long (58 x 25 cm) ca 17 litres	250
HASSMINI M	Mini Meter (98 x 25 cm) ca.32 litres	120
